

KOGLUMET ON GUARD YOUR HEALTH:

PREVENTION AND TREATMENT OF DISEASES CAUSED BY VIRUSES OF THE CORONAVIRIDAE FAMILY, INCLUDING WITH SARS-COV-2

Koglumet is an antiviral and immunomodulating drug, the mechanism of action of which is based on the restoration and effective mobilization of natural protective functions

Taking Koglumet for the purpose of prevention, 1 tablet 1 time per day for 10 to 20 days, contributes to the development of a high protective function against viruses, including against COVID-19

The use of Koglumet in patients with SARS-CoV-2 was accompanied by a noticeable improvement in laboratory and instrumental tests.

Under the influence of Koglumet in patients with coronavirus infection, a decrease in body temperature is observed, normalization or a significant improvement in respiratory and cardiac rhythms in a short time of use. Koglumet, depending on the severity of the disease, contributes to a marked decrease in the severity or regression of viral pneumonia in patients with COVID-19. Under the influence of the drug, a high immune response to SARS-CoV-2 is formed in the shortest possible time.

Koglumet markedly improves the general condition of patients with COVID-19. As a result, there is an early normalization of sleep and appetite, an increase in vitality.

Methods of application and dosage

Orally. The drug is prescribed as monotherapy or as part of complex therapy, 30-60 minutes before meals.

In viral diseases caused by the Coronaviridae family, including SARS-CoV-2, Koglumet is prescribed 2 tablets 2 or 3 times a day. If necessary, the dosage can be increased: 4 tablets 2 times a day. The course of treatment is from 15 to 30 days.

Side effects

Due to the fact that Koglumet contains natural bioactive substances (cobalt hydroxocomplex with glutamic acid and vitamin U), it is well tolerated. No side effects have been identified.

Contraindications

Hypersensitivity to the drug.

Drug interactions

Phenomenon incompatibility Koglumet with drugs basic therapy was not found.
